1. Introduction

Genius Inside has been working hard throughout the economic crisis because we believe that product development will keep us strong, which makes us better able to provide you with the tool you need to succeed. We have improved on existing Genius Project functions and developed some new features based on customer feedback and market surveys.

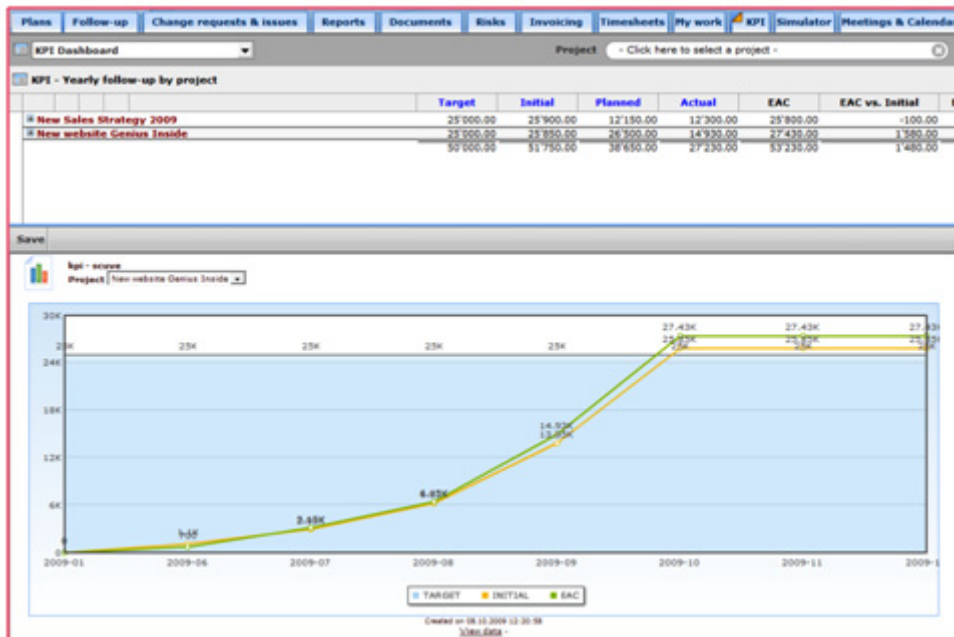

2. Improvements

- Personalized dashboard creation for users of any technical ability level;
- Expanded multi-currency management for specifying a different main currency for each project; and
- Calendar views that display project and personal schedules.

3. New functionality

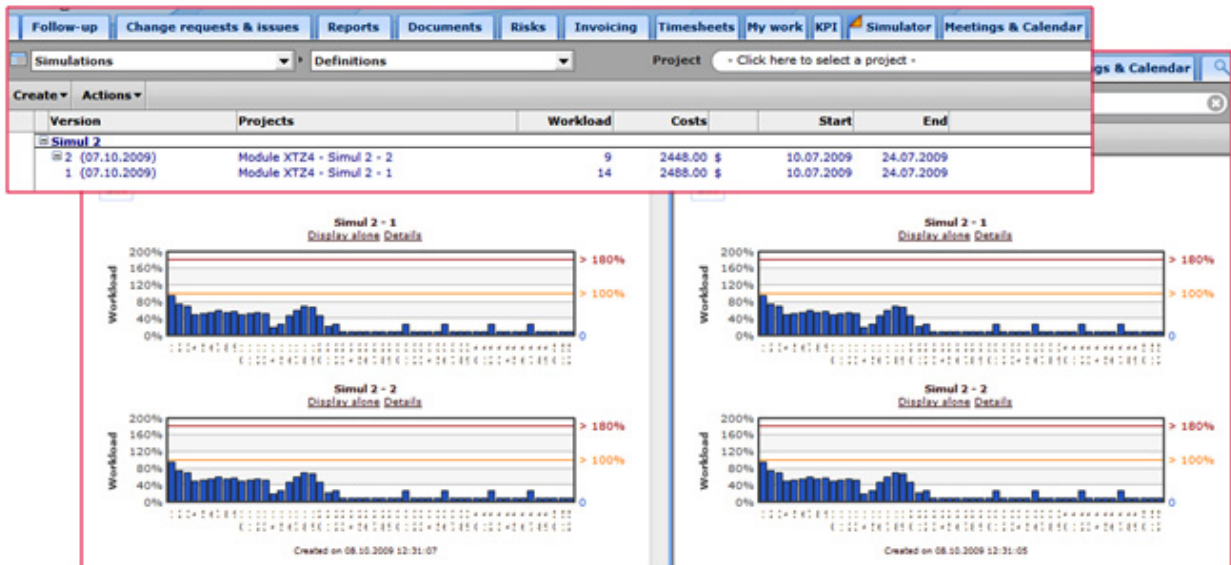

3.1 Project Output Tracking (KPI)

Genius Project allows users to define targeted and actual baselines for any kind of output where measurement is driven by milestones or period summary.

3.2 Genius Simulator

Genius Simulator is a planning tool that enables managers to create "what if?" scenarios to determine how a project will affect resources, deadline schedules, and respond to modifications.

3.3 Material resources management

Material resources management is useful for materials consumed while completing tasks. Managers define the type of material, its measurement unit and cost.

3.4 Meeting documents

Meeting documents are for planning project-related meetings. Genius Project automatically sends invites to participants through Microsoft Outlook, Lotus Notes or other e-mail applications.
